

## Guideline for Antminer Mining

**1. Create online/offline wallet (according to what coin and machine) to receive and store your coins you have gained through mining. Read and follow the website guide.**

To start with, online wallets are convenient and secure.

However, if big amount of coins are stored, we suggest offline wallet (extremely secure)

because online wallets are easily hacked if not managed carefully.

Please be aware that these are only suggestions and that we are not responsible for the possible losses due to hacking or scamming:

i.e.

Online wallet for BTC: blockchain.com

Offline wallet for BTC: bitcoincore.org

<https://www.cryptocompare.com/wallets/#/overview>

Nice guide to choose which wallets fit you the best.

**2. Once you are done creating your wallet, you should have (create if not) your public address for your wallet.**

Public address is needed for your miners to send coins.

**3. Create pool account (according to what coin and machine). Read the guide on the websites of different pool companies.**

Pools provide display function for your miners, hence you can check the miners easily, and see your daily payout (coins)

i.e. BTC: f2pool.com or antpool.com

**4. In pool account setting, add your public wallet address to payout address.**

This way, all the coins payout will be directly sent to your wallet.

**5. Provide us pool account username, hence we can connect the miners to your pool account right away.**
